

Ultracontour[®]

The new, safe, effective way to shape your body

Dr Gregory Taylor

DR GREGORY TAYLOR qualified as a Plastic Surgeon in 1982 and embarked on extensive overseas training experience in Canada and England. With over 20 years plastic surgical experience in New Zealand he is now a Specialist Plastic Surgeon with his own practice in Remuera, Auckland. His practice profile is largely cosmetic, including reconstructive surgery, and he is experienced in the treatment of skin cancer, especially the management of melanoma and non-melanoma skin cancers. He is recognised as one of New Zealand's pioneers of skin laser surgery, with more than ten years' experience in it.

Dr Taylor was first introduced to the Ultracontour® system overseas and championed its arrival in New Zealand, after seeing the benefits it has over other body sculpting methods available in the country. He has been trialling Ultracontour® with a number of patients (including himself) and is delighted to be able to offer and recommend a body sculpting system that delivers great, measurable results.

Dr Gregory Taylor explains; *"I have been brought up to believe that knives, surgery and discomfort were the only way to achieve tangible results relating to the reduction of body mass, so you can imagine my disbelief on the discovery that Ultracontour® provides comparable results to liposuction. In simplistic terms the non-invasive ultrasound essentially disrupts, or "melts away" the unwanted fat cells, leaving surrounding tissue unharmed."*

What is Ultracontour®?

ULTRACONTOUR® IS A NEW DUAL THERAPEUTIC DEVICE FOR OPTIMAL RESULTS IN NON-INVASIVE BODY SHAPING.

Unlike liposuction, which involves highly invasive surgery and the discomfort of the healing process, Ultracontour® is a fast and painless way to achieve a better body shape.

Put simply, Ultracontour® dissolves unwanted fat cells while leaving surrounding tissue unharmed. The results are amazing: expect a reduction of up to 2cm from the waist measurement after the first treatment. Most patients see a reduction in 3–5 circumferential cms after a course of five or less treatments, spaced a week apart.

Dr Gregory Taylor comments, *"The procedure is safe, with clinical tests proving that fat removed from the treatment area is cleared through regular fat metabolism pathways, with no adverse physiological effects. The fact that Ultracontour® is administered by health professionals provides patients with the security and reassurance that the process is safe and legitimate."*

FAQ

WHO IS ULTRACONTOUR® MOST EFFECTIVE FOR?

Ultracontour® is not a weight reduction procedure, but rather a body shaping procedure and is therefore not suitable for those looking to lose weight. The ideal person to experience Ultracontour is aged 20–60 years and has a body mass index (BMI) of 25–35 as they will benefit most from the Ultracontour® procedure.

The Ultracontour® treatment is the only medically known way to improve the appearance of cellulite.

HOW LONG DOES A TREATMENT TAKE?

Each treatment requires approximately 50 minutes, the first 25 of which consists of the client having impulses applied to their desired body area, the second 25 minutes is devoted to an ultrasound drainage massage.

DOES AN ULTRACONTOUR® TREATMENT HAVE ANY SIDE-EFFECTS?

No adverse effects have been reported.

IS ULTRACONTOUR® SUITABLE FOR MEN?

Yes, Ultracontour® effectively targets fatty tissue in both women and men. As is the case with woman, all men wanting the procedure must have a body mass index of 25–35 and be aged between 20 and 60 years.

ARE THERE ANY RISKS ASSOCIATED WITH THE ULTRACONTOUR® PROCEDURE?

Ultracontour® is designed to minimise risks and has been tested extensively to ensure this is so. It is administered by health professionals, trained in the area, who ensure the procedure is delivered in a safe, secure and successful way.

WHAT IS THE RECOVERY TIME AFTER A TREATMENT?

One of the great things about Ultracontour® is there is no recovery time. A treatment takes approximately 50 minutes after which you are able to return to normal activity immediately.

HOW DOES ULTRACONTOUR® DIFFER FROM OTHER COSMETIC NON-INVASIVE FAT-REDUCTION METHODS?

Ultracontour® cannot be compared to other non-invasive fat-reduction methods as, unlike other methods, Ultracontour® actually removes fatty tissue rather than just displacing it.

CAN ULTRACONTOUR TARGET SPECIFIC BODY AREAS?

Because Ultracontour® is about body shaping rather than weight loss, it is possible to target specific areas of the body. Most notably, Ultracontour® reduces the size of hips, thighs, and the abdomen by dissolving excess fatty tissues present in these areas.

WHERE IS ULTRACONTOUR® AVAILABLE?

Ultracontour® is exclusively available in Australasia at the offices of Dr Gregory Taylor. 126a Remuera Road, Remuera, Auckland.

"I can't admit to knowing how this works – but I know that it does. The measurements speak for themselves. My clothes fit better and I was aware of a difference from the first treatment."

"There is such a thing as no pain and still some gain. I am delighted with the results. I had a few unsightly bulges, but I don't any longer."

"I am a cynic and I approached with caution, but not anymore. Some may call this a miracle – I'd prefer to say it is just terrific, visionary technology."
